APPL-NO: JP06279905

APPL-DATE: October 19, 1994

INT-CL (IPC): G07D 9/00; G07D 9/00; G07D 9/00

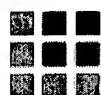

ABSTRACT:

PURPOSE: To secure fixed customers, to increase the sales and to reduce the work by installing a display/issuing device in supermarket, convenience store, department store and a store and the like, issuing a card displaying the sum when a small amount of coins such as one yen, five yen, ten yen and fifty yen are thrown in and using the card as the gift certificate of the store when the sum reaches a prescribed one.

CONSTITUTION: The sum which a user himself throw in from the small coin throw-in ports 6 and 7 in front of a case is displayed on a display panel 1, and the sum is printed on the picture recording card inserted from an image recording card take-out/in port 5 so as to return it. When the total sum of the image recording card reaches a previously decided amount, the card can be used as a gift certificate. The display/issuing device is provided with the small coin supply ports 6 and 7, the image recording card insertion/take-out port 5, operation switches 3 and 4 and the display panel 1, which are in front of the case, and a supplied coin selection/accumulation device, a card reader/ writer writing the added sum, an erasing device and a controller in the case.

Claims:

I claim:

1. A pre-paid card for ordering a gift item comprising a panel sized to be received in a compartment, and having front and rear faces, said front face including illustrations of gift items with each said illustration having a corresponding identifier printed adjacent the front face and rear faces being imprinted with instructional information for ordering any one of said gift items corresponding identifier.
2. The pre-paid card of claim 1, wherein one of said front and rear faces is imprinted with instructional information for activating said card at or following purchase.
3. The pre-paid card of claim 2, wherein said read-out indicia is selected from the group consisting of a UPC code, and a ASCII code.
4. The pre-paid card of claim 1, wherein at least a portion of one of said front and rear faces includes informational material relating to the purchase and sale of said card.
5. The pre-paid card of claim 1, wherein one of said faces of said panel is imprinted with a plurality of pre-selected gift items.
6. The pre-paid card of claim 1, wherein said plurality of pre-selected gift items comprise different arrangements.
7. The pre-paid card of claim 1, wherein said illustrations of a plurality of pre-selected gift items.
8. The pre-paid card of claim 1, wherein one of said front and rear faces includes price information for a plurality of pre-selected gift items.
9. The pre-paid card of claim 8, wherein said price information reflects a price for ordering any one of said plurality of pre-selected gift items.
10. The pre-paid card of claim 1, wherein one of said front and rear faces identifies a plurality of pre-selected gift items.
11. The pre-paid card of claim 1, wherein said instructional information includes a telephone number for ordering any one of said gift items.

Description:

BACKGROUND OF THE INVENTION

This invention relates to a card product, and more particularly, to a pre-paid card for type of gift item.

Pre-paid cards for telephone calls are well known. Typically, a consumer purchases a card operable by dialing an 800 access number and a corresponding PIN number that is unique to the card that is purchased. After dialing the 800 number and the unique corresponding PIN number to the service company, a consumer can make a domestic or international long distance telephone call.

Pre-paid telephone calling cards are typically purchased by individuals without easy access to telephone service, business travelers, students, and any other individual who is away from home on a regular basis.

While the prior art enables travelers and students to utilize the card-based system for making telephone calls, no card-based system for enabling those individuals to order gifts or other occasion items from home on a holiday such as Mother's Day, Christmas or a birthday, a traveler or student to order flowers or some other type of gift without having to purchase the item and send it, or having seen what it is. It is these disadvantages which the present invention overcomes.

SUMMARY OF THE INVENTION

Generally speaking, in accordance with the invention, a pre-paid card for sending a gift. The pre-paid card is sized to fit inside a wallet, and has a front face with photographs of selected gift items, and back face with warranty and instructional information, as well as a PIN number which is unique to the card. A plurality of pre-selected items depicted on the front face will each have a corresponding identifier number or code, so that the card user can electronically order the item.

Accordingly, it is an object of the invention to provide an improved pre-paid card.

Yet another object of the invention is to provide a pre-paid card for sending flowers and other gifts.

Yet a further object of the invention is to provide a pre-paid gift card which is imprinted with information on one side, and consumer ordering information on the other side.

Still other objects and advantages of the invention will in part be obvious and will in part be apparent from the following description.

The invention accordingly comprises the several steps and the relation of one or more of the steps to the others, and the article of manufacture possessing the features, properties and characteristics described and exemplified in the article hereinafter described, and the scope of the invention will be indicated by the appended claims.

BRIEF DESCRIPTION OF THE DRAWINGS

For a fuller understanding of the invention, reference is made to the following description taken in connection with the accompanying drawings, in which:

FIG. 1 is a front elevational view of a pre-paid gift card made in accordance with the invention.

FIG. 2 is a rear elevational view of the card depicted in FIG. 1.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

As shown in FIGS. 1 and 2, a pre-paid gift card generally indicated at 11, and made of a suitable material, cardboard material, plastic, or other printable substrate, is shown. Card 11 is made of a material that is sized for fitting into a conventional credit card receptacle contained in a wallet. The front face 15 (see FIG. 1) and a back or rear face 31 (see FIG. 2).

As shown in FIG. 2, back face 31 includes printed instruction information 33, which includes a telephone number. Back face 31 also identifies a PIN number 39 that is unique to card 11. PIN number 39 is not effective or activated until magnetic stripe 43 is processed through a read-out unit. The card may be activated at the point of sale, and may be also used to imprint other various elements on the card for the sales, marketing and inventory processes. As a result, card 11 may be displayed in a variety of ways.

area for customer self-selection.

Continuing with FIG. 2, back face 33 further includes written warranty information 43 under most applicable state laws. Back face 31 further includes either a UPC or ASCII inventory and/or tracking vendor sales, as is well known in the art.

Turning once again to FIG. 1, front face 15 of panel 13 includes price information 21 cost or purchase fee of card unit 11. Face 15 of panel 13 also includes description 25 is; source information 23 which identifies the manufacturer or sponsor of gift card unit 11; and promotional printed information 27.

Significantly, front face 15 includes illustrations 17 of a plurality of pre-selected gift items. As described, the gift items illustrated are various types of floral arrangements. However, ordering a flower gift item, and any other type of gift or occasion item may be illustrated 11, as is desired. Such items can include candy, fruit baskets, and various types of non-floral gift items. Card unit 11 is suitable for sending a gift for any type of occasion such as a baby shower, Valentine's Day, Mother's or Father's Day, etc.

As can be appreciated from FIG. 1, each illustration 17 of a pre-selected gift item has printed adjacent thereto. Identifier 19 is used for telephone ordering the corresponding gift item.

The use of inventive gift card unit 11 is now described. When a consumer goes into a store, he or she presents card unit 11 to the sales cashier, who passes back face 31, carrying magnetic stripe 43, to a read-out unit 41. This automatically activates the card. As can be appreciated, instructional information 33 includes a telephone access number 37 and PIN number 39, unique to card unit 11. The PIN number is not effective or activated until magnetic stripe 43 is processed through the read-out unit 41. Optionally, the PIN number may be concealed on face 31 by means of a scratch-off element.

Following purchase, the consumer is free, at his or her discretion, to access a selected gift item by using telephone access number 37. The consumer will identify a gift item to be selected by identifying a corresponding identifier 19. An operator who answers the telephone call. During the telephone call, the consumer will provide the access PIN number 39 and address information pertaining to where the gift item is to be sent. The cost for the gift item is determined by price information 21.

Depending on the service provided, the consumer will either provide the access PIN number 39 to the operator at the time of placing his or her order, or by punching in the PIN number with a PIN pad.

Alternatively, price information 31 may identify the price suitable for several different gift items. The consumer may select a gift item upon whether the service provides for a throw-away card based on a single use, or in a reusable card.

Illustrations 17 of the plurality of gift items can either be photos, drawings or some other representation clearly illustrating to the consumer the possible items to be selected.

In summary, there is provided a one-piece card unit for ordering gifts imprinted with identification information, indicia for activating the card, and a series of illustrations for identifying selected gift items.

It will thus be seen that the objects set forth above, among those made apparent from the drawings, have been efficiently attained, and since certain changes may be made in producing the above card unit without departing from the spirit and scope of the invention, it is intended that all matter contained in the drawings shall be interpreted as illustrative and in a limiting sense.

It is further understood that the following claims are intended to cover all of the features and advantages of the invention described, and all statements of the scope of the invention, which, as a matter of language, are to be interpreted in the light of the foregoing.
